

1. **\*\*Employee Table:\*\***

- EmployeeID (Primary Key)
- FirstName
- LastName
- Department
- Position
- Email
- Phone

2. **\*\*Travel Request Table:\*\***

- RequestID (Primary Key)
- EmployeeID (Foreign Key referencing Employee)
- Destination
- Purpose
- StartDate
- EndDate
- Status (Pending, Approved, Rejected)
- Comments

3. **\*\*Approval Table:\*\***

- ApprovalID (Primary Key)
- RequestID (Foreign Key referencing Travel Request)
- ApproverID (Foreign Key referencing Employee)
- ApprovalStatus (Approved, Rejected)
- Comments

This basic structure assumes that an employee can have multiple travel requests, each request can have multiple approval stages (if needed), and an approval is linked to a specific travel request.

Remember, in a real-world scenario, you might need to consider additional details like expenses, travel modes, and more. This is a starting point that can be expanded based on specific requirements.
